LILIES

STATELY • EXOTIC • BEAUTIFUL FRAGRANT

CANDIDUM. Madonna Lily. These emblems of heavenly purity are among the best-known and most popular of all garden Lilies. Hardy and of easiest culture, enduring sun and shade. Early and shallow planting—1 inch deep—in a deep, well-prepared and drained bed is imperative. Pure white flowers, borne 8 to 12 on a 3 to 4-foot stem, are delightfully fragrant. Bloom in June. 24 to 26 cm. bulbs. Each 45c; 3 for \$1.25; 6 for \$2.30; 12 for \$4.15; 25 for \$7.55; 100 for \$27.05.

REGALE. Regal Lily. Truly royal, this is one of the most beautiful and one of the hardest Lilies in cultivation. Flowers are flushed with yellow at center, shading to white at the outer edges; on the outside they are marked with reddish shading on the ribs. Grows 4 to 6 feet. Cover 5 inches deep in a well-drained, fertile, loamy soil. Well-rotted manure dug in some distance below the bulbs is quite beneficial. Delightfully fragrant, blooming in June and July. Each 60c; 3 for \$1.55; 6 for \$2.80; 12 for \$5.10; 25 for \$9.30; 100 for \$33.30.

Plant in well-drained soil, claws down; cover with sand, then soil, until the crowns are 2 inches deep. 3 for 30c; 6 for 50c; 12 for 90c; 25 for \$1.60; 100 for \$5.70.

SCILLA (Squill)

Early-flowering bulbs desirable for edging or massing in beds and borders. A good subject for naturalizing or planting in the rock garden. A sunny location is preferable.

WOOD HYACINTHS (Blue Bells)

SCILLA HISPANICA (campanulata). Taller growing than *Scilla sibirica*. Flowers are produced in spikes generally a foot in height. Invaluable for shrubbery borders, wild gardens, bare shady spots and woodland areas. Ideal for planting under pine trees. Although generally recommended for shady locations, they will thrive in full sun.

BLUE	PINK	WHITE

SNOWDROPS (Galanthus)

In January, country folks in Holland say the "Foolish Maidens" are up; a nicer Old English expression was the "Fair Maids of February," are back again. The French have the name "Perce-Neige" for this earliest of spring heralds. Their persistency is noteworthy; they thrive in cold climates, are not fussy about being disturbed, and neglected shady places are exactly their paradise. Of them it is often said "Grandmother planted these." Ideal for rockeries.

ELWESII. Distinct and beautiful, large white globular flowers having inner segments marked green. 6 for 35c; 12 for 60c; 25 for \$1.05; 100 for \$3.75.

NARCISSI

The flowering season of Narcissi begins extremely early and lasts until quite late. As cut flowers they have few equals. Culture is the easiest possible. Plant in any good garden soil; cover to a depth of about twice the height of the bulb, measuring from the base to tip. Early planting is advisable; however, many fine flowers are produced from plantings made after the first of February. Narcissi multiply quite freely. Every three or four years they should be taken up during summer or early fall and replanted. Never remove green foliage from the bulbs.

No garden is too small for a few Daffodils.
